Matterhorn World Cup Start House

Date
25.11.2023

energy self-sufficient, reusable, reversible - ingenhoven associates designed an innovative start house for the Ski World Cup downhill races at Matterhorn. This modular construction consists of air-filled elements, easily assembled in harsh environments and leaving no trace upon removal. Solar panels on the roof make the start house energy-independent. It is reusable, facilitating easy transport and storing. The design seamlessly harmonizes with the breathtaking alpine surroundings. project filmphoto credits: Daniel Hager
