

Stadion Kim Hae

Location

Kim Hae, Südkorea

Built

International competition 1996

Endless planes stretching between forests and green hill tops, structured by patterns of rivers and rice paddies, are characteristic for the landscape south west of Kim Hae. The Sports Complex is effectively integrated into the natural beauty of its surroundings. Form and construction of all sports grounds are based on a single design concept. Each individual stadium is a specialised version of the overall approach, adapted for a particular function. Due to the lightness and transparency of the membrane construction, the buildings seem to be almost hovering above the landscape.
